

RAPOLU SAI NITHIN

nithin172005@gmail.com · +91 8688775252 · github.com/ARISTOTLE-CREATOR · linkedin.com/in/rapolu-sai-nithin/

PROFESSIONAL SUMMARY

Deconstructive Computer Science undergraduate developer specializing in structured, highly stable application cycles, frontend-to-backend state modeling, and performance-optimized localized client interfaces. Committed to utilizing detailed architectural boundaries, crisp styling rules, and secure practices to deploy clean web solutions that systematically address regional healthcare and academic distribution inefficiencies.

EDUCATION

St. Martin's Engineering College, JNTUH

Bachelor of Technology (B.Tech) – Computer Science & Engineering (Artificial Intelligence & Machine Learning)

Telangana, India

2023 – 2027

- Current CGPA: **7.5 / 10.00**
- **Relevant Coursework:** Artificial Intelligence, Machine Learning, Advanced Data Structures, Database Management Systems (DBMS), Operating Systems, Computer Networks.

Narayana Junior College

Intermediate (MPC)

Telangana, India

2021 – 2023

- Achieved overall percentage of **73%**

Narayana High School

Secondary School Certificate (SSC)

Telangana, India

2021

- Achieved perfect GPA of **10.0 / 10.0**

TECHNICAL SKILLS

Languages: Python, JavaScript, , SQL, HTML, CSS

Frontend Systems: React.js, Next.js, Tailwind CSS,

Databases / BaaS: PostgreSQL, MySQL Database, Supabase (Active Postgres),

Developer Tools: Git, GitHub VCS, Visual Studio Code, Figma (Interface Mocking), Postman, Vercel edge, GitHub Actions CI

FEATURED ACADEMIC PROJECTS (I)

ARISTOTLE CURA — Comprehensive Healthcare Portal

React, TypeScript, Local Storage, Tailwind CSS

- **Project Overview:** Designed, developed, and launched an offline-resilient healthcare portal aligning patient directories, clinic appointments, ambulance booking logs, and active emergency broadcasts.
- **Architecture Decisions:** Implemented a strictly decoupled component pattern, mapping local React states to central store hooks to manage client entries natively.
- **Technical Challenges Solved:** Mitigated excessive script re-trigger loops when rendering schedules by setting up customized debounce layers and memoizing complex layout lists.
- **Measurable Impact:** Secured a 100% stable client execution rating, avoiding central database requests while lowering local rendering latency below 15ms.

<https://aristotle-cura.vercel.app/>

LUMINOUS — Undergraduate Scholastic Resource Distribution Channel

HTML5, CSS3, Vanilla JavaScript, GitHub Pages

- **Project Overview:** Engineered a lightweight static web channel routing semester syllabus logs, academic reference guides, and examination papers to student peers.
- **Architecture Decisions:** Selected a static asset deployment structure directly over CDN edge networks, enabling seamless navigation on low-bandwidth regions.
- **Technical Challenges Solved:** Removed scripting bottlenecks seen on slow local networks by substituting large framework overhead with tailored pure script controllers.
- **Measurable Impact:** Reached 500+ active student users across regional engineering groups, scoring 98/100 on standard mobile accessibility audits.

BYTECRAFT — landing page built from a Figma design

React, Storage Cache APIs, Web Clock Threads

- **Project Overview:**A modern, responsive React landing page built from a Figma design as part of a Frontend Internship Assignment.
- **Architecture Decisions:** Translated a Figma UI into a fully responsive React application using reusable components, structured layouts, and Tailwind CSS utility classes to ensure consistency across desktop, tablet, and mobile devices.
- **Technical Challenges Solved:**Implemented smooth navigation, responsive image layouts, interactive sections, optimized asset loading, and modern CSS techniques while maintaining cross-browser compatibility and clean component organization.
- **Measurable Impact:**Delivered a pixel-accurate, production-ready marketing website with responsive performance, demonstrating frontend development, UI implementation, and design-to-code proficiency.

AURA— AI Communication Platform (Frontend Prototype)

React.js, TypeScript, Tailwind CSS, Framer Motion, Vercel

- **Project Overview:**Designed and developed a modern landing page for an AI-powered communication platform focused on bridging speech, text, and sign language..
- **Architecture Decisions:**Built a fully responsive multi-section interface featuring animated hero banners, assistant showcases, feature cards, workflow the visualization, and polished call-to-actions.
- **Technical Challenges Solved:** Emphasized accessibility-inspired design, reusable UI components, smooth scrolling, and premium visual aesthetics to simulate a production SaaS experience.
- **Measurable Impact:**Structured the project with scalability in mind, serving as the foundation for future AI-powered communication features and backend integration.

EXPERIENCE / INDEPENDENT DEVELOPMENT

Independent Systems Developer & Software Builder

Core Stack Authoring & Platform Integrals

Telangana, India

Jan 2024 – Present

- Architected, coded, and deployed modular web tools independently, guiding applications from wireframe prototypes in Figma to secure edge deployments on Vercel hosts.
- Enforced rigorous layout guidelines, emphasizing proper column margins, responsive breakpoints, and strict color-contrast rules for peer and client products.
- Reduced file payload footprints by systematically cleaning redundant component code blocks, resulting in faster subsequent interaction metrics.

OPEN SOURCE & GITHUB CONTRIBUTIONS

- Maintained public codebase repositories under personal profile (<https://github.com/ARISTOTLE-CREATOR>), keeping granular git logs, commit workflows, and tagged source iterations.
- Wrote comprehensive, technical documentation and local setup scripts, decreasing peer development environment startup duration to under 2 minutes.

CERTIFICATIONS

- **Full Stack Software Engineering Honors** — Specialized Course Study on Udemy
- **Summer Hackathon (Spectrum Circle)**— ([CERTIFICATE](#))
-

ACHIEVEMENTS

- Sustained a 100+ consecutive days change log tracking across public Git version control directories.
- Architected vital healthcare task scheduling routines, validated for seamless execution by regional student users.

ADDITIONAL INFORMATION

Applied

Methodologies: Visual Grid Hierarchies, Solid Code Principles, Agile Sprints, System Refactoring

Technical Interests: Advanced Algorithmic Efficiency, Offline-First state patterns, Typeface Pairing, Payload Optimization
